

*Vitrified Shale Arena Conditioner*

- Keeps Soil Loose and Workable
- Prevents Caking & Hardening
- Reduces Dust
- Improves Drainage
- Water Less Frequently, Use Less Water when Watering
- Inorganic, Stable, Durable

- Is your riding arena hard and unworkable?
- Is it excessively dusty?

Standard sand or clay soils can be very dusty and have a tendency to harden, or cake. Adding *ArenaBlend Conditioner* will significantly reduce dust and prevent your arena from hardening or caking and will keep the soil loose and workable.

**UTELITE**  
CORPORATION

*ArenaBlend* is  
Manufactured by:

Utelite Corp.  
PO Box 387  
Coalville, UT  
84017

801-467-2800

[www.utelite.com](http://www.utelite.com)

*ArenaBlend* is available in bulk, and is typically delivered by semi or dump truck load. Because of its light weight, you receive approximately *twice the volume* per truck load versus standard sand.

Although application rates can vary by location, tilling or harrowing 1-2 inches of *ArenaBlend Conditioner* into the top 3-6 inches of your arena's top layer is a good rule of thumb.
